1. General Knowledge

This system is prepared for easily finding stocked products in the stores.

✚ For better stock mixture in the store you need to refill the missing sizes for the products because in the store there is limited place to display your products. So to display more models in the store you need to replenish the products by size, and model basis.

✚ It is hard to detect the exact place of the products in the warehouse, if you have defined locations at the warehouse it will be easier and faster to detect the exact product you need.

✚ After sales if you have stock at the warehouse you will know the exact spot of the products which is needed.

✚ With multiple movements and easy ways you will act faster for the replenishment of the correct products.

Note! To use the system; first you need to determine the locations, and then print the location barcodes, then scanning products into the locations.

Note! To have the data you need, it is important to keep **all** the stock at the locations correctly.

2. Accessing Addressing System

Firstly you need to open the Retail Store Program in your computer then open the addressing cursor by selecting.

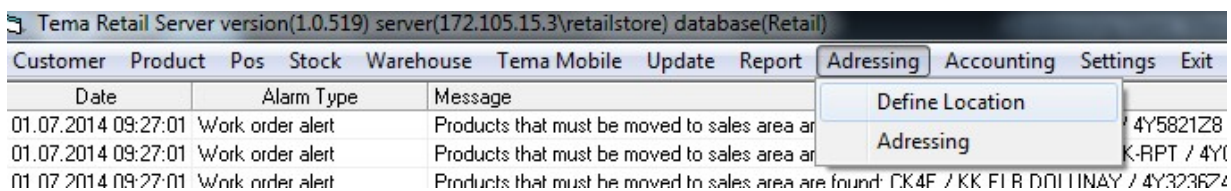

Figure 1 Accessing Addressing Page

Define location: you can define locations

Addressing: you can scan products to the locations.

3. Defining Location

Static Location

Static locations are used for the static units at the warehouse such as; → Shelves, drawers etc.

3.1.1. Defining Static Location

Define Stockroom: You need to enter the number of your stockroom number. If there are multiple stockroom locations (for ex. one in the store one in another location) you need to enter the number here. If there is only one stockroom you need to enter 1. After you enter column quantity cell will be active.

Defining Column: After entering stockroom number, you need to enter the rack number (column nr.) in the stockroom. As you can see at the right side as an example there are 11 racks for the stockroom in the store.

Defining Shelf Quantity: After entering rack number, shelf quantity cells will be active. You need to enter the shelf number for the each rack as can be seen on the right side.

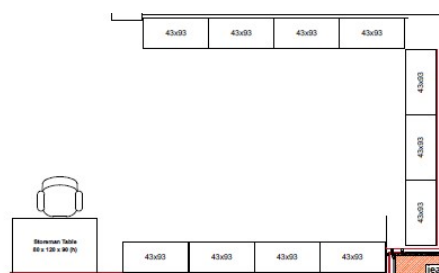

Figure 3 Example Stockroom Layout

The 'Define Static Location' dialog box is shown. It contains three main sections: 'Define Stockroom', 'Define Column', and 'Define Shelf Quantity'. The 'Define Stockroom' section has a 'Stockroom Qty.' dropdown set to '1' and a 'Clear Locations' button. The 'Define Column' section has a table with 'Stockroom' and 'Static Column Qty.' columns, showing '1' in the first row. The 'Define Shelf Quantity' section has a table with 'Stockroom', 'Column Nr.', and 'Shelf Quantity' columns, showing values for 11 columns and 8 shelves per column. A 'Prepare Matrix' button is at the bottom right.

Stockroom	Static Column Qty.
1	11

Stockroom	Column Nr.	Shelf Quantity
1	1	6
1	2	6
1	3	6
1	4	7
1	5	7
1	6	7
1	7	5
1	8	5
1	9	8
1	10	8
1	11	8

Figure 2 Define Static Location

If you enter all the needed data, you need to click the **'prepare matrix'** button. To prepare the Static location numbers. The system will prepare a unique number for each shelf.

3.1.2. Naming Static Location

After you prepared all of the locations, you can enter more details to your defined locations. (Please check the figure below)

- For example you can choose the top group for the products you will put to the location. You need to choose the group from the drop-down list. (KR: for mixed shelves AS: for visual equipment, barcodes, labels etc.)
- Also you can enter explanation for more details, like **X-Side / LCW** or you can enter classification explanation for the location like **T-shirts/Chino Pants** or if you are near to season you can enter line Names, as **Swimwear Line / Accessories Line / Jersey Line**

Location Name	Stock room	Column Nr.	Shelf Nr.	Location Nr.	Top Group	Explanation
S-1.1.1-BG-New	1	1	1	1.1.1	BG	New Season
S-1.1.2-BG-X-Side	1	1	2	1.1.2	BG	X-Side
S-1.1.3-BG-LCW	1	1	3	1.1.3	BG	LCW
S-1.1.4	1	1	4	1.1.4		

Figure 4 Naming Static Location

Note! If you double click the location name you will be able to see the detail of that location (it will go automatically addressing page it will be explained at further pages).

3.1.3. Deleting Static Locations

If you want to change your locations for example you added new rack of new type of shelf system you can delete the matrix you prepared for the locations by clicking **'clear locations'**. If you delete the locations all the scanned product information at the locations will be lost.

Attention! If you delete the location and need to prepare new matrix you need to print new location barcodes and need to scan the products to the locations again.

Location Name	Stock room	Column Nr.	Shelf Nr.	Location Nr.	Top Group	Explanation
S-1.1.1-BG-New	1	1	1	1.1.1	BG	New Season
S-1.1.2-BG-X-Side	1	1	2	1.1.2	BG	X-Side
S-1.1.3-BG-LCW	1	1	3	1.1.3	BG	LCW
S-1.1.4	1	1	4	1.1.4		
S-1.1.5	1	1	5	1.1.5		
S-1.1.6	1	1	6	1.1.6		
S-1.1.7	1	1	7	1.1.7		

Figure 5 Deleting Static Locations

3.2. Dynamic Location

When you have boxes and/trolleys which has stock in it but actually they are not static stock units, (for ex. Extra stock boxes for winter coats, accessories which are also in the rayon) you might need to put stock for a temporary time you can use this application.

This will help you to use your stockroom in more efficient way. Because for now if you put products in to a box, you need to check inside of every box to find the exact product you need.

3.2.1. Defining Dynamic Location

First you need to choose the '**define dynamic location**' page and click the '**prepare dynamic location**' button.

You need to choose the top group and you can enter an explanation also as mentioned earlier.

After entering the information about the location defining you need to '**save**' the location by clicking the button.

You can see the dynamic locations on the '**define dynamic location**' tab.

After defining the dynamic locations, you can double click to the location to see the detail.

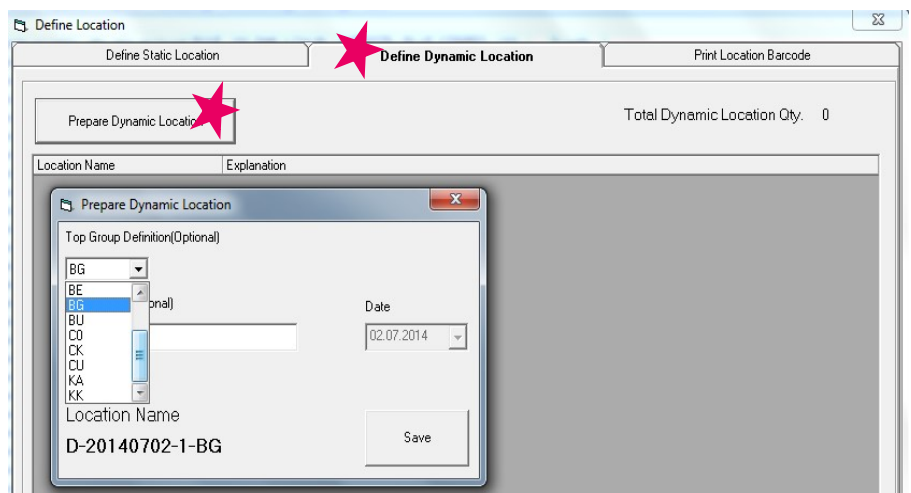

Figure 6 Defining Dynamic Location

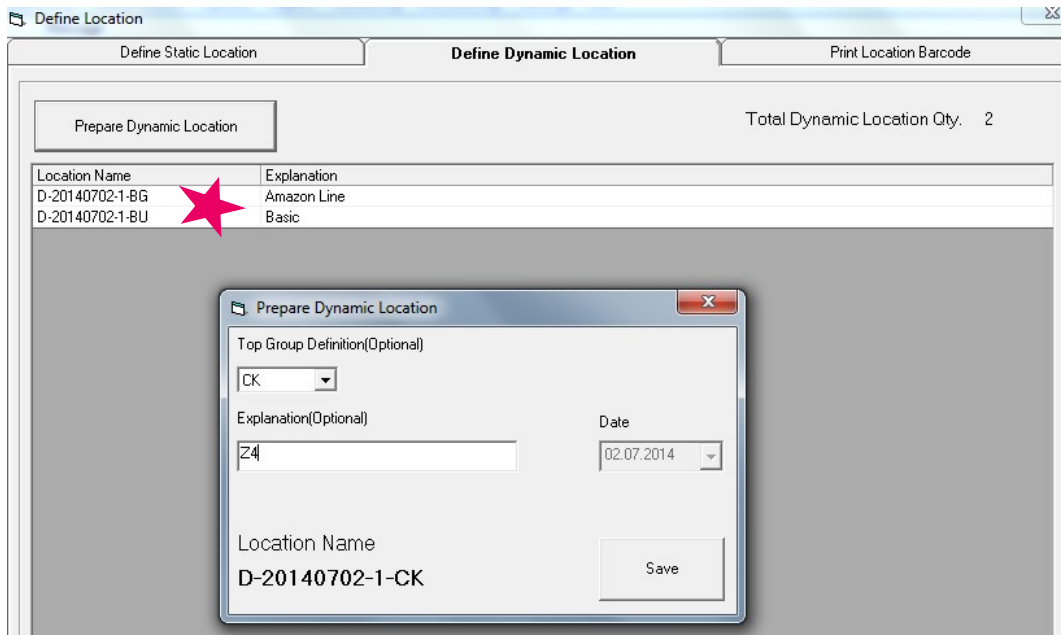

Figure 7 Dynamic Location Tab

3.2.2. Deleting Dynamic Location

After scanning the products in the dynamic locations if you remove all of the products in the location by clicking clear location button, the location will be deleted automatically.

Or if you remove the entire products in the location the location will be deleted automatically.

4. Printing Location Barcodes

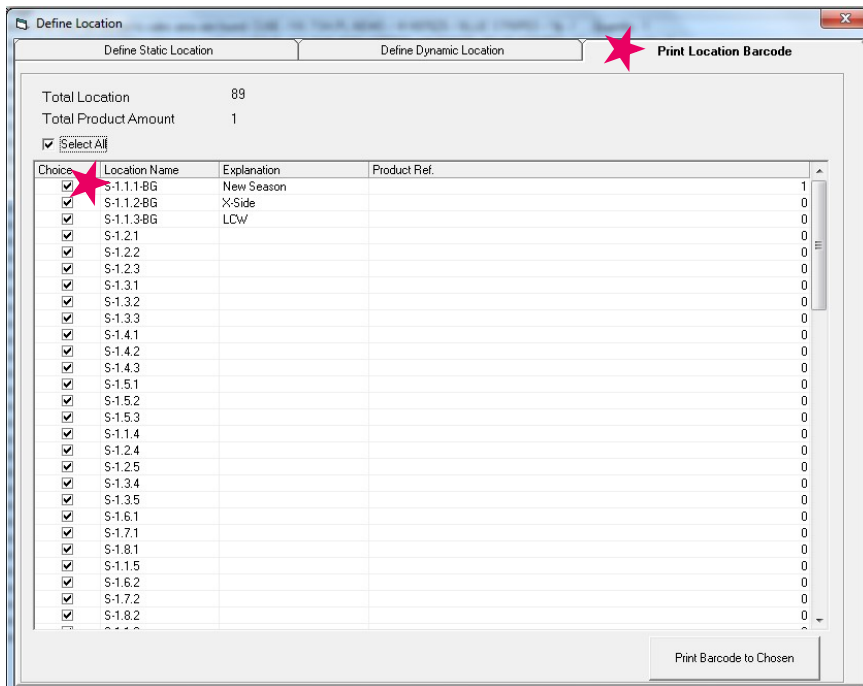

Figure 8 Printing Location Barcode Screen

At the **'Define Location'** page if you choose the **'Print Location Barcode'** tab, you may print barcodes for your locations.

You can click select all for to print all locations or just choose the locations which you need printing.

After you chose the locations, click **'Print Barcode to Chosen'**

The page will appear as following all you need is to print for the barcodes.

5. Addressing

You can use the **"addressing"** tab to scan products into the locations.

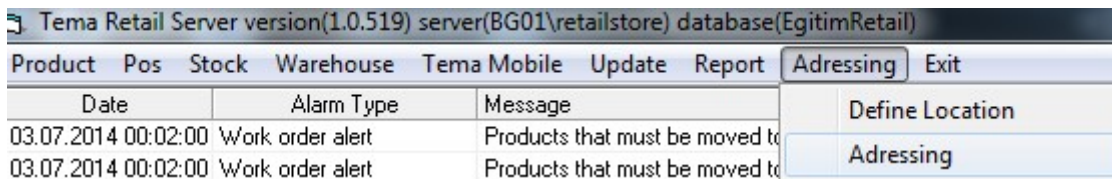

Figure 9 Accessing Addressing System

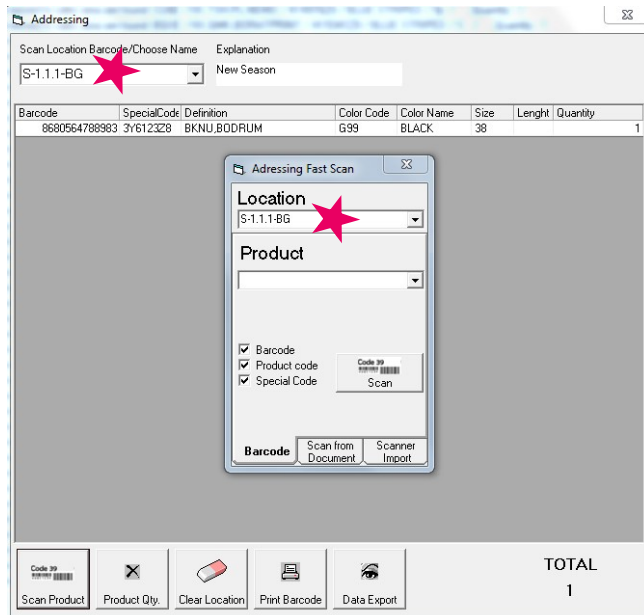

Figure 10 Addressing Screen

This screen is used for scanning products in to the location or removing, deleting the location and printing location barcodes.

While scanning the barcode you will use screen opened with the pop-up.

5.1. Scanning Product to / from a Location

After you opened the location by double clicking, to scan products in to the location please, push the **'scan product'** button.

If you want to remove product from a location click the **'product qty.'** button than scan the product you want to remove.

If you click **'clear location'** if the location is static location all of the products in the location will be removed. If the location is a dynamic location the products from the location will be removed and the location will be *erased*. You can print a location barcode for the chosen location in

the screen by clicking **'print barcode'** button.

Note! If you change the location from the product scanning screen, you can scan products to the location you chose. If you don't change the location all the products you scanned will move to the chosen location.

6. In Store Stock Movements

You can move products from location to rayon, or the products from rayon to location, there are two ways to scan the products

1. One by one movement
2. Location based movement

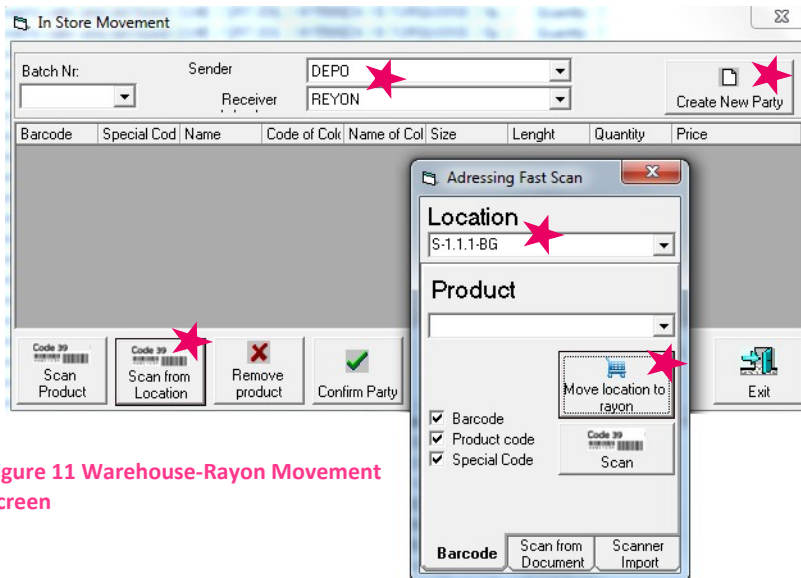

Figure 11 Warehouse-Rayon Movement Screen

After opening stock flow inside store screen, you need to choose the destination from 'rayon' to 'warehouse' or from 'warehouse' to 'rayon'. After clicking the **'create new party'** button the **'scan from location button'** will be active.

After **'Addressing Fast Screen'** opens you need to choose the location and scan the products.

To choose the location, you can scan the location barcode or choose from the dropdown list.

If you scan products from warehouse to rayon, the products you scanned will be removed from the **location** and the **stockroom** and will be shown on the rayon stock.

Attention! If you scan the last product in a dynamic location from 'warehouse' to 'rayon' the dynamic location will be erased.

Note! If you don't choose another location the products you scanned will be removed from the same location. You need to change the location if you want to scan products from another location.

If you want to move all of the products from warehouse to rayon you need to click **'Move location to rayon'** button and the warning screen will be opened and click **'yes'** to scan all of the products in the location will be moved to rayon.

If you use the **'Move location to rayon'** for a dynamic location since all of the products in the location are removed the location will be erased automatically.

Note! You cannot make movements from rayon to warehouse at this screen.

7. Product Search

At the sales process if a customer asks a product, it is hard to find the product at the warehouse. So with this screen, you will be able to see the exact location for a product which is at the warehouse.

At the 'product search' screen' after you scan the barcode if you double click on the product (shown with the star) you can see which location has that product.

Attention! If you don't scan the products into the locations this screen will not be able to show the details.

Figure 12 Product Search Screen

8. Printing Discount Labels for the Products in the Location

For discount Labels:

After choosing **Product/Discount Label** tab, you need to choose 'add by criteria' button. And choose the 'lokasyona göre bas' from the 'print type' tab.

Figure 13 Discount Label Criteria Add Screen

Figure 14 Discount Label Criteria Add Screen

For white labels:

After choosing **Product/White Label** tab, you can choose the location from the 'location name' or you can just scan the location barcode into the 'location barcode cell'

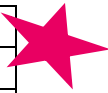

9. Reports

You can keep the track of the location stocks in the reports following reports:

1. Special Reports/Stock Reports/1 Detailed Stock Report
2. Special Reports/Stock Reports/35 Products Awaiting Transfer from Store
3. Special Reports/Stock Reports/41 Report of the Products Expected to Display in Rayon
4. Special Reports/Stock Reports/5003 Work Orders-Completed, Remaining Quantity, Product Detail

Note! Reports mentioned above has extra column for the location, in each report you will be able to see the 'location: quantity' of the product at the location. Example is given as below:

Location: Quantity
S1.1.2-BG: 2
D20140702-1-BU: 2

10. Quick Tips!

- ✚ **You can use data export as always for scanning products into/from locations.**
For example; after you accepted inside of the box, after you data export the box. You can scan the document in a location.
- ✚ **While choosing locations for the printing screens you can use “control” button as always for multiple choices.**
- ✚ **You can put ‘,’ between locations to choose multiple locations while printing labels**
- ✚ **You can put ‘,’ between product barcodes to choose multiple product barcodes while scanning into or from the locations as always.**
